► Physical Properties Abbreviations

Table of Abbreviations

Abbreviation	Name
ACL	Acetal
COC	Cyclic Olefin Copolymer
ECTFE	Ethylene Chlorotrifluoroethylene
EPDM	Ethylene Propylene Diene Monomer Rubber
EPR	Ethylene Propylene Rubber
ETFE	Ethylene Tetrafluoroethylene
FEP	Fluorinated Ethylene Propylene
FLPE	Fluorinated High-density Polyethylene
HDPE	High-density Polyethylene
HIPS	High Impact Polystyrene
LDPE	Low Density Polyethylene
PC	Polycarbonate
PEI	Pothetherimide
PET	Polyethylene terephthalate
PETG	Polyethylene terephthalate copolymer
PFA	Perfluoroalkoxy
PMMA	Polymethylmethacrylate
PMP	Polymethylpentene
PP	Polypropylene
PPCO	Polypropylene Copolymer
PPE	Modified Polyphenylene Ether
PS	Polystyrene
PSF	Polysulfone
PURS	Thermoplastic Polyester Polyurethane
PVDF	Polyvinylidenedifluoride
ResMer™	ResMer™ - Glass Filled
SAN	(No Suggestions)
Silicone Gaskets	Silicone - Gaskets, filled - typically red
Silicone 50/65 Tubing	Silicone - Tubing, and unfilled (translucent) o-rings
PTFE / TFE	Tetrafluoroethylene
TPE	Thermoplastic Elastomer
Thermanox®	Proprietary NUNC Resin
Permanox®	Proprietary NUNC Resin
Tritan™	Proprietary CoPolyester

► Physical Properties Footnotes

- 1 Heat Deflection Temperature is the temperature at which an injection molded bar deflects 0.01 in. when placed under 66 psig (ASTM D648) of pressure. Materials may be used above Heat Deflection Temperatures in non-stress applications; see Max. Use Temp.
- 2 Ratings based on five minute tests using 600 watts of power on exposed, empty labware. CAUTION: Do not exceed Max. Use Temp., or expose labware to chemicals which heating cause to attack the plastic or be rapidly absorbed.
- 3 The plastic will absorb and retain significant amounts of heat resulting in an unexpectedly hot surface.
- 4 **STERILIZATION:**
 Autoclaving (121°C, 15 psig for 20 minutes) – Clean and rinse items with distilled before autoclaving. (Always completely disengage thread before autoclaving.) Certain chemicals which have no appreciable effect on resins at room temperature may cause deterioration at autoclaving temperatures unless removed with distilled water before hand.
 EtO Gas – Ethylene Oxide: 100% EtO, EtO:Nitrogen mixture, EtO:HCFC mixture
 Dry Heat – exposure to 160°C for 120 minutes without stress/load on the polymer parts
 Disinfectants – Benzalkonium chloride, formalin/formaldehyde, hydrogen peroxide, ethanol, etc.
 Radiation – gamma or beta irradiation at 25 kGy (2.5 MRad) with unstabilized plastic.
- 5 Sterilizing reduces mechanical strength. Do not use PC vessels for vacuum applications if they have been autoclaved. Refer to Use and Care Guidelines for Nalgene™ Labware, for detailed information on sterilizing.
- 6 “Yes” indicates the resin has been determined to be non-cytotoxic, based on USP and ASTM biocompatibility testing standards utilizing an MEM elution technique with WI38 human diploid lung cell line.
- 7 Resins meet requirements of CFR21 section of Food Additives Amendment of the Federal Food and Drug Act. End users are responsible for validation of compliance for specific containers used in conjunction with their particular applications.
- 8 Acceptable for aqueous foods only, at temperatures up to 121°C / 250°F. Not sanctioned for use with alcoholic or fatty foods at any temperature.
- 9 Acceptable for:
 Nonacid, aqueous products; may contain salt, sugar or both (pH above 5.0)
 Dairy products and modifications; oil-in-water emulsions, high or low fat
 Moist bakery products with surface containing no free fat or oil
 Dry solids with the surfaces containing no free fat or oil (no end-test required) and under all conditions as described in Table 2 of FDA Regulation 177.1520 except condition A - high temperature sterilization (e.g. over 100°C / 212°F)
- 10 Acceptable for:
 Alcoholic foods containing not more than 15% (by volume) alcohol; fill and storage temperature not to exceed 49°C (120°F)
 Non-alcoholic foods of hot fill to not exceed 82°C (180°F) and 49°C (120°F) in storage.
 Not suitable for carbonated beverages or beer or packaging food requiring thermal processing.
- 11 Straight-sided jars, beakers and graduated cylinders only.
- 12 Acceptable for aqueous, oil, dairy, acidic, and alcoholic foods up to 71°C/160°F.
- 13 The brittleness temperature is the temperature at which an item made from the resin may break or cracked if dropped. This is not the lowest use temperature if care is exercised in use and handling.
- 14 The tubing will become opaque from absorbed water, see the current NALGENE® Labware catalog information on Autoclaving PVC Tubing for details.
- 15 WVTR = Water Vapor Transmission rate in g-mm/m² - 24 hr. - 1 Bar at 37°C and 90% Relative Humidity.
- 16 WVTR = Water Vapor Transmission rate in g-mm/100 in² - 24 hr. - 1 Bar at 37°C and 90% Relative Humidity.
- 17 Acceptable for:
 Frozen or refrigerated storage: Ready-prepared foods intended to be reheated in container at time of use
 1. Aqueous or oil-in-water emulsion of high- or low-fat.
 2. Aqueous, high- or low-free oil or fat.
- 18 Will vary based on exact composition
- 19 If microwaved in the presence of water; the tubing will become opaque from absorbed moisture, see the current Nalgene Labware catalog information on Autoclaving PVC Tubing for details.
- 20 Glass Transition Temperature is the reversible transition in amorphous or semi-amorphous materials from a hard and relatively brittle state into a flexible or rubber-like state without becoming a true liquid.
